

Using HTML, CSS, and JavaScript (Backbone.js, AngularJS, React, ect... welcomed) display a responsive / mobile friendly list of data showcasing the data provided to you via JSON matching the following specific requirements:

- HTML page should have a full width fixed header on the top of the page that reads “User Directory”
- Fixed header should change to scroll with the page in a ‘tablet’ or ‘phone’ viewport.
- A list of all users should be rendered on the page via client side technology from the supplied JSON.
- A collapsable / expandable section per user showing the following information when collapsed.
 - First and last name
 - Email address
 - An icon representing if the user has a telephone number on file or not
- When section is toggled open, the following contact information should be visible.
 - Username
 - Email
 - Address information (street, suite, city, zip code)
 - Phone Number
 - An External link to the user’s website.

Specific styling is left to you, but should present a consistent design aesthetic across the page. The use of libraries and add-ons is fine as long as it's clear what code is yours. Also please don't rely too heavily on them since while integration is a good skill, we're mostly interested in your ability to code.

Feel free to take up to three days to complete this with at least the minimum requirements mentioned above complete. When completed please share a google drive folder with us for review.
